

Business Description

We are engaged in business in three areas: electric power, sensors and welfare & health.

Electric Power Sector

We are developing equipment related to electric power, information and communication, monitoring and control, and river management. Since development is carried out according to each facility, each product is custom-made. We also conduct other contract inspections of equipment.

Sensors

We are developing products that protect the safety of equipment, such as non-destructive rebar fracture tester and non-contact oil detection sensor.

Welfare & Health

We are developing products that help people in their daily lives, such as electric artificial larynx, and high-illumination light irradiation device.
